\$18 off total charges of required spa components when coupled with 1 or more of signature spa services (Microbubble, Clay Pack with FIR Therapy, Ultrasonic Ozone Spa & Medec Electrolysis Detox Dip).

Panax Ginger Root (zingiber zerumbet) is known to stop flakes formation and soothe inflamed skin. Our mix of ginger root, birch bark, white willow and oak moss not only performs the mentioned but also tones skin with its astringent properties.

/Repair

Vitamin H (commonly known as biotin) works with fenugreek extract to bring about stimulation and revivification of hair growth and regrowth. Placenta extract (derived from sheep) brings about intense hydration via its biodynamic nutrients like essential amino acids, proteins, SOD, nucleic acids and growth factors.

Essential for companions with sensitive or inflamed skin to initiate or strengthen hair growth.

/Reinvigorate

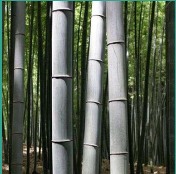

Dead Sea Mud Red Clay (highly concentrated with iron oxide) not only draws toxin from the skin but also aids with tissue repair and normalizing sebaceous secretions. Important for adjustment of skin's pH level.

/Rejuvenate

Besides being known for its antioxidant effects, Green Tea contains polyphenones that synergizes with ginger root to significantly reduce skin inflammations, allowing the kick-in of the collagen tonic to bring about repair and healing.

/Repair

Tabashir Bamboo, with its high silica content (we have added in pine extract too), acts to strengthen the integrity of skin and coat structure. With a vinegar mix of lavender, rosemary, sage and thyme, the bamboo extract provides strength to collagen synthesis.

/Replenish

The naturally-occurring cypress essential oils (from beads) and germanium stones synergizes to relax muscles and lift excessive oils from the skin. A lingering and subtle scent is left on companions having enjoyed a cypress wood dip.

/Relax

Application of an essence from ginkgo biloba (G.Biloba) brings about a increase in micro-circulation towards the surface of the skin, promotes tissue irrigation and boosts collagen formation.

/Reinforce

Botanical extracts (in ampules), mainly enzymes from plum and nato beans, can be used to naturally enrich and vivify/ discoloured and lightened coats due to illness, old age or skin conditions. Besides regaining the original hue, shine and sheen is observed after this enhancement session.

/Restore

Fruit enzyme bubble baths is also available for furbies who just want a relaxing and pampering session. Coats will be lightly scented for between 7 to 10 days after such baths and some furbies remain smelling like 'heaven' even after 2 weeks (indoor pooches). You get to choose from black cherry, passion fruit, blood orange and pink grapefruit!

/Relax

## Refreshingly Bubbly...

Petopia launches the **Pure Blyss Spa System™**, with modular treatment components that makes the 'tailoring' process\* hassle-free! All you have to do is check the treatment components against the symptom/conditions you'd like your pooch to receive treatment on, and we will conduct a further assessment before the session is conducted. It is that simple!

\*Further 'tailoring' is required for certain cases
